## about

I'm a Front End Developer specialized in React and CSS. I'm really passionate about UI design, design systems, responsive design, animations, and CSS-in-JS. I'd be interested in anything related to improving the web UI and make it look and feel like a native application.

I'm keen on tooling and other ways to leverage, as much as possible, the automation of workflows.

I'm also interested in the latest technologies and trends in the front end space like SSR, GraphQL, or PWAs.

## skills

### HTML

HTML5, Semantic, Accessibility, ARIA, Responsive Web Design

### CSS

CSS3, Sass, BEM, OOCSS, SMACSS, Flexbox, CSS Grid, PostCSS, Bootstrap, Foundation

### JavaScript

ES6, TypeScript, jQuery, GraphQL, Unit Testing, Jest, E2E Testing, Cypress, Puppeteer

### React

Redux, Redux Toolkit, Redux Thunk, Gatsby, Next, Apollo Client, Urql, Reselect, React Router, Reach Router, Emotion, Styled Components, React Testing Library, Enzyme, Framer Motion, React Pose, React Spring, Storybook

### Tools

GIT, CircleCI, AWS, Netlify, Vercel, Webpack, Parcel, ESLint, Prettier, Grunt, Gulp, Sketch, Figma, Zeplin, Balsamiq, Adobe Photoshop, Adobe XD, Adobe Target, Google Analytics

### Misc

UI Design, UX Design, Wireframing, Agile, Scrum, Kanban, TDD, BDD, A/B Testing, CI/CD

## work experience

**10/2019**  
**Currently**

Senior Software Engineer

at [Sainsbury's](#) - London (UK)

As Front End Tech Lead of one of the teams in the marketing family, I'm responsible for shaping the direction of the Front End architecture of the products from inception to delivery with particular attention to the React landscape. My target is to improve the performance of the sites, reduce error rates and boost accessibility; with particular focus on tooling to increase automation and the developer experience in order to deliver more, faster and safer.

As part of the leadership team of the family, I'm heavily involved with the interview process and the family's community of practices, where I'm really active by collaborating, sharing and reaching out to other colleagues and teams.

06/2018  
10/2019 Software Engineer

at [Sainsbury's](#) - London (UK)

Worked in an Agile team delivering a wide range of projects. As part of the Front End team, I focused on developing React web applications, with a high emphasis on performance and user experience. In order to achieve this, I have implemented a variety of technologies, tools, and services that have fulfilled those expectations and in many ways have lowered the cost and improved substantially the development experience, thus increasing the work delivery.

In addition, I have worked closely with the Back End and Cloud team not only to expand my knowledge in those areas but also to apply solutions that improve my projects overall.

Last but not least, I have been an integral part of the interview processes to expand my current team and the mentoring process for our graduates.

01/2018  
05/2018 Front End Developer

at Optimad - London (UK)

In charge of developing a new platform for the UK TV Broadcasters and Advertisement Media Outlets, implementing a modern front end setup, and designing and maintaining a comprehensive style guide for the project.

10/2016  
01/2018 UI Developer

at [Harrods](#) - London (UK)

Developed and supported the main website with a special focus on the checkout user journey using high standards of performance, responsiveness, and accessibility. Created several internal tools to improve the efficiency of other departments' workflows. Additionally, I was responsible for the development of the email templates.
